

BrowserExpress

Web-Based Email for Your Web Site

<http://www.BrowserExpress.com>

BrowserExpress is a web based email client that web-enables any mail server in less than 10 minutes with only three files. The BrowserExpress interface is fully customizable to support your branding, banner advertisements and language choice. BrowserExpress implements POP3, SMTP, LDAP and MIME standards. With BrowserExpress, your users can access their email accounts; retrieve, read, and send email and attachments through your own mail server from anywhere. BrowserExpress maintains corporate identity - impossible with public, free email services.

BrowserExpress is easy to install and use. Copy three files to your CGI-capable web server and enter the mail server information into the configuration file. Users then access BrowserExpress using the URL or link that you give them. BrowserExpress requests the user's email credentials and connects to the mailbox on your mail server. User credentials are encrypted between the web browser and web server. POP3 authentication is supported.

1-5 users: \$60
6-20 users: \$75
21-75 users: \$100
76 + users: \$150
Enterprise: \$250

Two types of licenses are available. The Domain License is for an organization's users to access email accounts on a single domain. Prices are based on the number of users. The Enterprise License enables any number of users to send and receive email from any domain for which the user has a valid email account. The Web site operating with this license can be used by anyone to check his or her email from the hosting site of BrowserExpress, regardless of where the user has email accounts.

The BrowserExpress software manual, customization tips and FAQ are available on line at www.BrowserExpress.com. FREE support for BrowserExpress is provided via email. Progressive Software Solutions, LLC is a provider of Web-Based Business Solutions. For organizations with a limited IT staff, an installation service is available or PSS can host the application for you.

Forward Looking Companies Use:

BrowserExpress is available for most operating systems and will connect to most mail servers. You must have access to the CGI-capability on your web site. You also must have a mail server to connect to. Any web browser can be used to read and send mail. Minimum disk space required is 1.5 mb for the application, configuration file and your logo file.
